

Digital currency from Papros Inc

- 1. The Sthree chain (pS³chain²) is built in advanced crypto technology that is used by the US Government and banks, based on SHA-2 encryption.**
- 2. A means of exchange between parties who recognize each other's services or goods may wish to transact such value based on the recognition of the other's good faith. In effect, an IOU for goods and/or services or transacted is recorded securely, while a current evaluation by both parties allows any applicable taxes to be computed. Apart from the tax liabilities, the parties may wish to just transact such IOUs till such time as they wish to exchange among each other or with third parties it for government currency. As this represents a formal digitalized record meant to be an honest service of use for everyone, any fraud or misuse will be tracked and full legal recourse will be sought against offending parties to the tune of ten million US dollars over and above any other costs incurred.**
- 3. The IOUs are formally called the Papros Goodzels, combining the name of the company and an old name of currency in popular use in old times.**
- 4. Papros Inc will neither exchange such Papros Goodzels for currency nor guarantee any exchange for currency, government or other. It only provides a record of the Goodzels created and held by users in a digitally secure manner.**
- 5. Papros has created an initial amount of Goodzels as treasury and will not issue them without exchange for value or service. The creator of the site and enabling technology has been issued a restricted tranche of Goodzels which may be exchanged over the next twenty years. Goodzels can now be created only by the virtual economy enabled, by the delivery of goods and/or services and the compensation therefor. There will be no other issue of Goodzels. All Goodzels will be created at this rate and any tax liability for any transaction will be the responsibility of the parties involved only and not that of Papros Inc which provides the service of a secure method of conducting such a transaction. All Goodzels have traceable vintage. Thus each tranche of Goodzels could be uniquely valued. In its current deployment Goodzels represent Non Fungible Token, each with unique vintage, value and traceable history.**
